1. Project Overview

This project is a **Social Media Analytics Dashboard** built in Power BI. Its objective is to analyze the performance of **2,000 social media campaigns** across different platforms and industries, helping users compare platforms, identify performance patterns and make data-driven marketing decisions.

Headline KPIs

Campaigns	Avg Followers	Avg Engagement	Avg Conversion	Avg ROI
2,000	72.6	35.4	4.7	173.2

2. Dataset and Metrics

The dataset covers 2,000 campaigns on six platforms and seven industries.

Platforms: Instagram, Facebook, TikTok, X/Twitter, YouTube, LinkedIn.

Industries: Travel, BFSI, Fashion, Technology, FMCG, Healthcare, E-commerce.

Metrics: engagement rate, click-through rate, conversion rate, ROI, followers, posting frequency, sentiment and analytics maturity.

3. Methodology

Step 1 - Data preparation: load the dataset into Power BI, check data types and clean blanks and duplicates.

Step 2 - DAX measures: create KPI measures such as total campaigns, average engagement, average conversion, average ROI and average followers.

Step 3 - Visualization: cards, bar charts, column charts, donut chart, scatter plot, gauge and matrix.

Step 4 - Interactivity: Platform and Industry slicers filter every visual; navigation buttons link the three pages.

4. Dashboard Pages

Page 1 - Overview

Executive summary with KPI cards, Engagement Rate and ROI by Platform, Engagement by Industry and the Campaign Distribution donut.

Figure 1: Overview page

Page 2 - Platform & Engagement Analysis

Compares audience reach, engagement and user response across platforms. Slicers: Platform, Industry and Analytics Maturity. Visuals: Average Followers by Platform (column), Click-Through Rate by Platform (bar), Audience Size vs Engagement (scatter), Average Sentiment Score (gauge, 0.54 on a 0 to 1 scale), Posting Frequency by Platform (column) and a Platform x Industry Performance matrix showing Engagement %, CTR %, ROI % and Conversion %.

Figure 2: Platform & Engagement Analysis page

Page 3 - Insights & Recommendations

Figure 3: Insights & Recommendations page

5. Results and Analysis

Engagement rate by platform

ROI by platform

Engagement by industry

ROI by industry (as shown on dashboard)

Average followers by platform

Click-through rate (%) by platform

Posting frequency by platform

Platform performance summary

Platform	Engagement	Conversion	ROI	Campaigns	Share
TikTok	35.6	4.9	174.5	305	15.25%
YouTube	34.9	4.9	175.4	290	14.5%
X/Twitter	35.7	4.9	177.1	290	14.5%
Facebook	33.8	4.8	170.2	366	18.3%
LinkedIn	36.2	4.6	173.6	222	11.1%
Instagram	36.2	4.4	170.8	527	26.35%
Total	35.4	4.7	173.2	2,000	100%

6. Key Insights

Insight 1 - Platform engagement: LinkedIn and Instagram lead (36.2 each); Facebook is lowest (33.8). The overall spread is small.

Insight 2 - Business performance: X/Twitter has the highest ROI (177.1), followed by YouTube (175.4). Travel and Fashion lead on ROI by industry.

Insight 3 - Audience and engagement: the most engaging platforms (LinkedIn, Instagram) show the lowest conversion (4.6, 4.4), while TikTok, YouTube and X/Twitter reach 4.9. High engagement does not automatically mean high conversion.

Insight 3b - Reach and response: YouTube has the largest average audience (76.5 followers) and posts most often (11.22); X/Twitter has the smallest audience (65.1) yet ranks second on CTR (25.2). TikTok has the highest CTR (25.5), while Instagram has the lowest (22.2). Average sentiment is 0.54 on a 0 to 1 scale, i.e. mildly positive to neutral.

Insight 4 - Analytics maturity: campaigns with higher analytics maturity (Low to Advanced) show higher ROI on the scatter plot.

7. Business Recommendations

1. **Compare platforms using multiple KPIs** - engagement + CTR + conversion + ROI.
2. **Monitor engagement-to-conversion performance** - check that engaged audiences convert.
3. **Compare campaign performance by industry** - set benchmarks per industry.
4. **Track analytics maturity** - better measurement practice goes along with better ROI.

8. Limitations and Future Scope

Limitations: a single dataset of 2,000 campaigns; modest differences between platforms; relationships shown are correlations and should not be read as causal effects.

Future scope: time-trend analysis, deeper sentiment analysis, budget vs ROI, automated data refresh and predictive modelling.

9. Conclusion

The Power BI dashboard converts 2,000 campaigns into a clear, filterable view of platform and industry performance. No single platform wins on every metric, so marketing decisions should rely on several KPIs together. The three-page design takes users from a quick overview, to platform comparison, to actionable recommendations.
